

Hello,

You should build React-based GIS web-application using ArcGIS Maps SDK for JavaScript

<https://developers.arcgis.com/javascript/latest/>

You can use this link as a startup point:

<https://developers.arcgis.com/javascript/latest/es-modules/>

The application should display a map zoomed on Israel.

The app should display capital cities from all over the world.

Use that link as source data:

<https://www.arcgis.com/home/item.html?id=d9677f2ef1d547c29fc30e628596f0c0>

By clicking on the point of a city (should be red symbol) a popup will display the name of the city and the population only.
